

ONPAGE AND EMAIL
INTEGRATION

OnPage and Email Integration

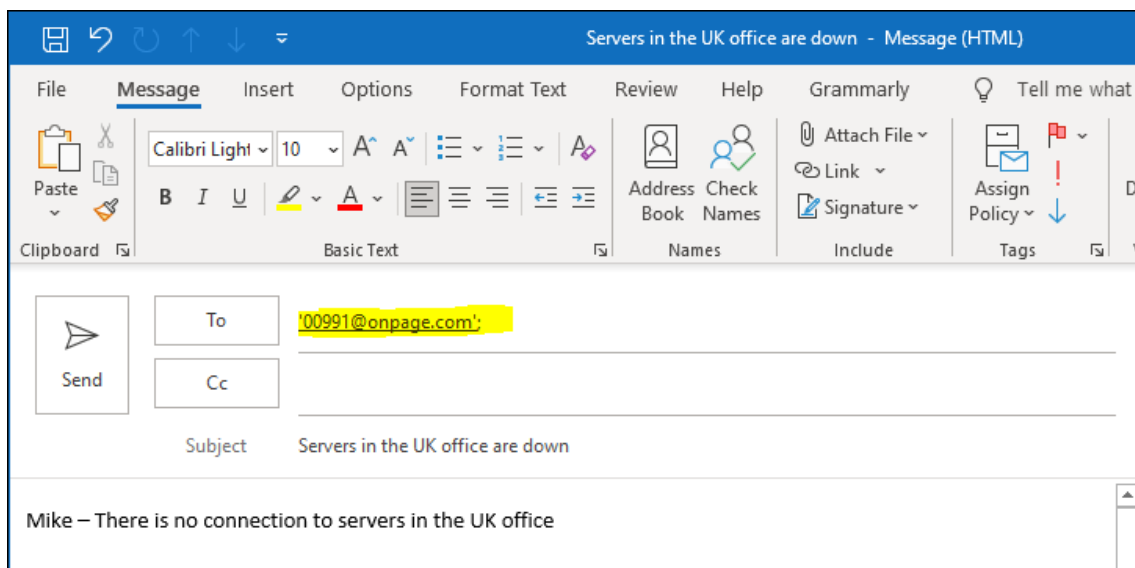

OnPage allows you to integrate with any email platform and send notifications. Using email's inherent rules, forward email alerts to your OnPage accounts or groups.

Checkpoints:

If you are forwarding from Microsoft O365, make sure that you have enabled external forwarding. Microsoft's external email forwarding policy does not allow the use of external forwarding unless permitted.

Forwarding emails:

- Route High Priority alert to OnPageID@OnPage.com

- Route Low Priority alert to OnPageID@Low.OnPage.com

This means that any IoT, monitor, or security alert can be sent via email to OnPage. And using email's logic, you can forward emails to your OnPage accounts. You can forward messages including attachments such as **word**, **pdf**, **.jpg**, and **.wav** files.

Get message statuses written back into your email showing that message was **sent**, **delivered**, **read**, and **replied** to.

Message to 00991 - [Received] - (Do not Reply)

OnPage <do_not_reply@onpage.com>

To Abdu Kibuuka

The current status of the OnPage sent to 00991 is:

Received

Subject: Servers in the UK office are down

Page: Mike - There is no connection to servers in the UK office

Message to 00991 - [Read] - (Do not Reply)
